

erwin[®] Data Governance (DG)

AT A GLANCE

erwin Data Governance (DG) expands data governance beyond IT, so all organisational stakeholders can discover, understand, govern and socialise data assets to mitigate risk, improve organisational performance, and accelerate growth.

erwin DG integrates traditional data governance capabilities (business glossary, data dictionary, data catalog, lineage analysis, impact analysis, and rules and policy authoring) with data modeling and data preparation capabilities.

KEY BENEFITS/RESULTS

- Provides data visibility
- Identifies data integrations, implications and impacts across the enterprise to better manage change
- Creates an integrated ecosystem of people, processes and technologies that manage and protect data, promoting organisational collaboration and empowerment
- Breaks down business and IT silos for visibility across all domains
- Helps mitigate a wide range of risks to provide regulatory peace of mind

KEY FEATURES

- Role-based, self-service visualisation and navigation
- Data stewardship and data ownership assignments for approval processes
- Powerful API
- Highly configurable user experience for streamlined workflows, notifications and task assignments
- Business glossary builder for your organisation – synonyms, acronyms, relationships, prioritisation and approved standards
- Rule management to reduce risk and ensure regulatory compliance
- Issue management – raise issues, change requests, queries or errors against model objects
- Sensitive data discovery identification and documentation
- Policy management – author, maintain and publish
- Data dictionary – help answering, “where is our data?”
- Intuitive web interface for access from anywhere
- Data Impact Analysis – Real time impact diagrams
- Reference data management – Standardise how information is articulated
- Metadata Catalog creation automation and maintenance
- Data usage catalog to help you understand who and what is using your data
- Data lineage – understand, harvest and document the origin and journey of data
- Self-service data discovery – Communication requirements for BI reports
- On-premise or SaaS options with perpetual or subscriptions licences
