

erwin[®] Business User Portal

AT A GLANCE

The erwin Business User Portal is a self-service, read-only portal geared primarily toward business users to facilitate easy access to data management and governance information. With its flexible search mechanisms, business users can look up information and then perform the required analysis for quick and accurate decision-making.

KEY BENEFITS/RESULTS

- Breaks down silos between disconnected systems, spreadsheets, reporting and intelligence
- Installs quickly and easily
- Deploys on premise or in the cloud
- Facilitate understanding of organisational segments and behavioral data patterns

KEY FEATURES

- Technical and business metadata
- Glossary management
- Reference data management
- Linkage between business terms and technical metadata
- Data lineage to understand flow of information across various systems
- Impact analysis

SOLUTION OVERVIEW

- Easy, flexible and efficient search capabilities — Use filter dropdown options, key in wildcard/exact text, select the fields that the search should go across, and provide the necessary inputs to the search engine.
- Consistent, sub-second response times — Interact with the data at the speed-of-thought. without support from technical experts.
- Ability to deduce the output data — Understand that an answer to one question leads to another, enabling business users to better identify and analyse metrics and relationships.
- Self-Service — No support is required from technical experts.
- Integration with erwin Data Governance — The BUP and erwin DG use the same backend repository, so business users can see information that has been fed into erwin DG for analysis.
