

# erwin<sup>®</sup> Enterprise Architecture (EA)

## AT A GLANCE

erwin Enterprise Architecture (EA) aligns business and IT modeling, analysis, strategy and plans allowing you to develop complex enterprise architecture models to drive business transformation. erwin EA Agile enables business and technical stakeholders to get a complete and contextual view of their architecture assets to manage change in a cost-effective way while mitigating risks.

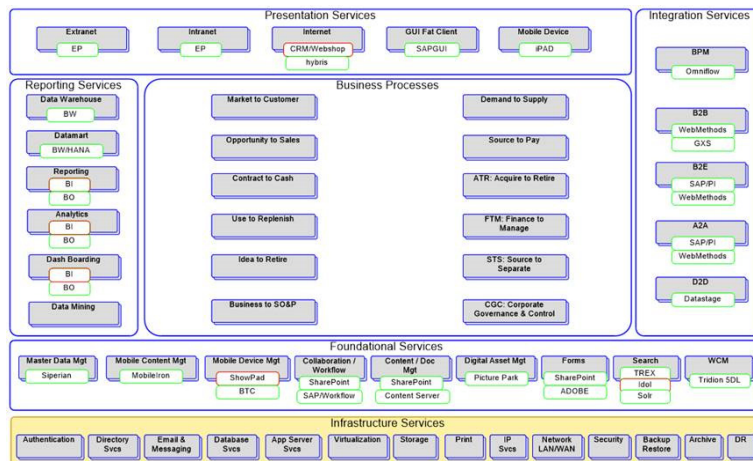

## KEY BENEFITS/RESULTS

- Align business and IT with consistent design, documentation and communication of architecture assets
- Understand the full impact of changing business and IT capabilities in support of strategic decision-making
- Model and integrate complex goals, strategy, process, application, business and technology architectures
- Collaborate around transformation initiatives, engaging all stakeholders

## BUSINESS CHALLENGES

Increasing amounts and complexity of enterprise data coupled with digitalisation has made understanding and managing change both challenging and important. Making data-backed decisions is vital for increasing quality and performance while reducing cost.

Organisations are always looking for new ways of innovating and growing through differentiation. However, this is risky, and goals, strategies, capabilities and infrastructure must be carefully aligned with full stakeholder engagement.

## KEY FEATURES

- Visualise the organisation, structure and complexities of the business through capability maps and business process models
- Assess the impact of change, identify improvement opportunities and avoid issues by aligning and referencing IT architecture and business models
- Flexible and configurable platform
- Tailor industry best practice and frameworks to meet your specific needs
- create fully customised web experiences for your information consumers
- Business friendly terminology and stakeholder driven analysis
- Built in work-flows, discussions, surveys and social network features to promote engagement
- Repository based architecture modeling for mapping of intricacies and complexities of your enterprise environment while allowing easy information retrieval
- Bridge the gap between Business, IT and Data with easy to use reporting and publishing.
- Integrate with other tools
