

Product Portfolio

Sandhill

erwin provides **enterprise modeling and data intelligence** software that connects all aspects of your business, technology and data architectures for accurate, real-time insights that fuel the desired results. The erwin EDGE combines enterprise architecture, business process and data modeling with data catalog and data literacy capabilities so stakeholders can discover, harvest, understand, govern and socialise data assets to unleash more potential and greater value across risk management/regulatory compliance, agile innovation and business transformation initiatives. Our ability to harmonise and automate enterprise architecture, business process modeling, data management and data governance gives customers unmatched return on investment as they turn information into opportunities.

erwin Data Modeler

The world's first and most trusted data modeling software for visualising metadata and database schema to understand complex data sources, as well as design and deploy new ones. Discover and document any data from anywhere for consistency, clarify and artifact reuse.

erwin DM NoSQL

Extension of erwin DM and the only enterprise-class data modeling software with native support for Couchbase, Cassandra and MongoDB NoSQL database platforms. Model and manage JSON-like data structures as effectively as traditional data sources.

erwin Data Catalog

Automated metadata harvesting, data cataloging, code generation and data lineage software with data mapping, reference data management, lifecycle management and data profiling capabilities. Efficiently integrate and activate data within a single, unified catalog in accordance with business requirements.

erwin Data Literacy

Business glossary management and data discovery software for the collaborative definition of enterprise data in business terms with built-in accountability and workflows. erwin DL provides self-service, role-based, contextual views of data assets to ensure IT and business users understand and speak data the same way.

erwin Data Intelligence Suite

Combines the capabilities of erwin Data Catalog with erwin Data Literacy for greater awareness of and access to available data assets, guidance on their use, and guardrails to ensure data policies and best practices are followed. Automatically harvest, transform and feed metadata from a wide array of data sources, operational processes, business applications and data models into a central catalog and then make it accessible and understandable within context via role-based views.

erwin Evolve

Full-featured, configurable enterprise architecture and business process modeling and analysis software. Document systems and technology, design processes and value streams, and manage innovation and change with all EA and BP artifacts in one place for use by both IT and business users.
