erwin® Web Portal

AT A GLANCE

The erwin Web Portal provides a simple, customisable, web-based interface that allows users across the organisation to easily discover, visualise and understand the data sources, structures and architectures that drive business. Aided by metadata, information and annotated diagrams from erwin data models, allows full utilisation of strategic assets. With easy navigation and an integrated view into the data landscape enables users to increase their "data fluency" and effectively contribute to a data-driven approach to business.
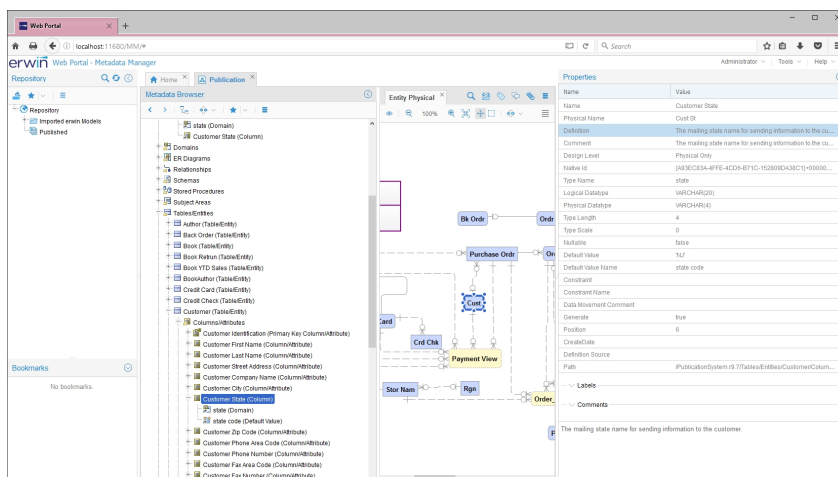

KEY BENEFITS/RESULTS

- Collaboration via a customisable web-based interface

- Reduce data source discovery and analysis cycles associated with data-driven initiatives

- Increase data quality and strategic data usage by enabling stakeholder "data fluency"

BUSINESS CHALLENGES

As the digital world rapidly changes, companies look for new ways of innovating. However, integration can bring risk and disruptions but represents significant opportunities for business transformation to a more data-driven approach. With increasing stakeholders involvement and accountability for data quality, consistency and veracity, organisations need an effective way to collaborate across roles and organisational silos to manage their complex data infrastructure in an agile and cost-effective way.

KEY FEATURES

- Business and technical user interfaces and reporting
- "High Fidelity" diagram visualisation — view models in various formats
- Graphical impact analysis, lineage and "where-used" reporting
- Metadata reporting and export to CSV
- Metadata search, browse and drill-down capability
- Collaboration services with tags, comments, attachments and a managed feedback loop
- erwin Data Modeler integration and design layer lineage
- Web-based user and role management — including integration with Enterprise Single Sign-On
- Internet-style keyword search and browse
